According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

SECTION 1: IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1 Product identifier

Product name:	Hi Perform Diesel
Synonym:	High Performance Diesel, HiQ Diesel
CAS Number:	not applicable (mixture)
EC Number:	not applicable (mixture)
Index Number:	not applicable (mixture)
REACh Registration Number:	not applicable (mixture)

1.2 Relevant identified uses of the substance or mixture and uses advised against

COMMON USE: Use as a fuel, heating fuel and other industrial uses IDENTIFIED USES IN THE CHEMICAL SAFETY REPORT: description of Identified Uses Life cycle: Formulation or re-packing: Formulation & (re)packing of substances and mixtures Uses at industrial sites: Distribution of substance, Use as a fuel Widespread uses by professional workers: Use as a fuel Consumer uses: Use as a fuel

USES ADVISED AGAINST: The uses of substances are the uses are indicated above. Other uses are not recommended unless an assessment is completed, prior to commencement of that use, which demonstrates that the use will be controlled.

See Annex for a complete list of uses and use descriptors, for which an ES is provided.

1.3 Details of the supplier of the safety data sheet

Company name:	Q8 Quaser s.r.l.
Address:	Via dell'Oceano Indiano, 13
City / Nation:	00144 – Roma (Italia)
Telephone:	+39 06-520881
Competent Technician E-mail:	<u>schede@q8.it</u>

1.4 Emergency telephone number

Italy:	Centro Antiveleni Ospedale Niguarda (Milano), +39 02.66101029
Foreign countries:	Contact the closest Poisons Information Centre

SECTION 2: HAZARDS IDENTIFICATION

Physico-chemical hazards:	flammable product.
Human health hazard:	The mixture causes skin irritation, harmful if inhaled. Because of the low viscosity of the product, it may be aspirated into the lungs or directly after ingestion or later in the case of spontaneous or induced vomiting, in such cases there may be aspiration pneumonia. May cause damage to organs throught prolonged or repeated exposure. Suspected of causing cancer.
Environmental hazard:	Toxic to aquatic life with long lasting effects.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

2.1 Classification of the substance or mixture

Flam. Liq. 3:	H226
Asp. Tox. 1:	H304
Skin Irrit. 2:	H315
Acute Tox. 4:	H332
Carc. 2:	H351
STOT RE 2:	H373 (thyme, liver, bone marrow)
Aquatic Chronic 2:	H411

For full text of H-phrases see Section 16.

2.2 Label elements

Hazard pictogram(s):

Signal word:	DANGER
Hazard statement(s):	H226 - Flammable liquid and vapour
	H304 - May be fatal if swallowed and enters airways
	H315 - Causes skin irritation
	H332 - Harmful if inhaled
	H351 - Suspected of causing cancer
	H373 - May cause damage to organs through prolonged or repeated exposure (thyme, liver, bone marrow)
	H411 - Toxic to aquatic life with long lasting effects
Precautionary statement(s):	Prevention:
	P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking
	P261 - Avoid breathing dust/fume/gas/mist/vapours/spray
	P273 - Avoid release to the environment
	P280 - Wear protective gloves/protective clothing/eye protection/face protection
	Response:
	P301+310 - IF SWALLOWED: Immediately call a POISON CENTER or a doctor
	P331 - Do NOT induce vomiting
	Disposal:
	P501 - Dispose of contents/container in accordance with local / regional / national / international regulation
Other Information:	Note N (full text given in Section 16)

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

2.3 Other hazards

Hot product may form explosive and flammable vapour-air. The vapour product is heavier than air: may accumulate in confined spaces and low lying areas where it may easily be accidentally ignited.

The product does not meet the criteria for classification as PBT or vPvB required by Annex XIII of REACH.

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

Not applicable.

3.2 Mixtures

Component		Identifier	Concentration	Classification accordig to Reg. (CE) 1272/2008	
1.	UVCB Substance: FUELS, DIESEL ("A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of C9 through C20 and boiling in the range of approximately 163°C to 357°C")	CAS Number: 68334-30-5 EINECS Number: 269-822-7 INDEX Number: 649-224-00-6 Registration Number: 01-2119484664-27-XXXX	> 93% v/v	Flam. Liq. 3: H226 Asp. Tox. 1: H304 Skin Irrit. 2: H315 Acute Tox. 4: H332 Carc. 2: H351 STOT RE 2: H373 Aquatic Chronic 2: H411	
2.	FAME	CAS Number: 68990-52-3 EINECS Number: 273-606-8 Registration Number: 01-2119485821-32—xxxx <i>or</i> CAS Number: 67762-26-9 EINECS Number: 267-007-0 Registration Number: 01-2119471662-36-xxxx <i>or</i> CAS Number: 67762-38-3 EINECS Number: 267-015-4 Registration Number: xx-xxxxxxxxx-xx—xxxx	0 - 7% v/v	Not classified	

For full text of H-phrases see Section 16.

SECTION 4: FIRST AID MEASURES

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

4.1 Description of first aid measures

Eye contact:	Rinse cautiously with water for several minutes, remove contact lenses, if present and easy to do so. Seek medical attention if skin irritation, swelling or redness develops and persist.
Skin contact:	Remove contaminated clothing, contaminated footwear and dispose of safely. If irritation, blurred vision or swelling occurs and persists, obtain medical advice from a specialist.
	For minor thermal burns, cool the burn. Hold the burned area under cold running water for at least five minutes, or until the pain subsides. Body hypothermia must be avoided.
	When using high-pressure equipment, injection of product can occur. If high-pressure injuries occur, immediately seek professional medical attention. Do not wait for symptoms to develop.
Swallowing /aspiration:	Do not induce vomiting as there is high risk of aspiration. Do not give anything by mouth to an unconscious person.
	If vomiting occurs, the head should be kept low so that the vomit does not enter the lungs (aspiration).
Inhalation:	Inhalation is unlikely because of the low vapour pressure of the substance at ambient temperature. Exposure to vapours may however occur when the substance is handled at high temperatures with poor ventilation. In case of symptoms arising from inhalation of product fumes, mists or vapour: remove casualty to a quiet and well ventilated place if safe to do so. If casualty is unconscious and not breathing, ensure that there is no obstruction to breathing and give artificial respiration by trained personnel. If necessary, give external cardiac massage and obtain medical advice. If the casualty is breathing, place in the recovery position. Administer oxygen if necessary.

4.2 Most important symptoms and effects, both acute and delayed

The mixture may cause skin irritation, slight eye irritation. It can cause irritation of the respiratory tract due to excess fume, mists or vapour exposure. In case of ingestion: few or no symptoms expected. If any, nausea and diarrhea might occur.

4.3 Indication of any immediate medical attention and special treatment needed

In case of ingestion, always assume that aspiration has occurred. Send the casualty immediately to hospital. Do not wait for symptoms to develop.

SECTION 5: FIREFIGHTING MEASURE

5.1 Extinguishing media

Suitable extinguishing media:	Small fires: Sand or earth, carbon dioxide, foam, dry chemical powder.
	Large fires: Foam, water fog (trained personnel only). Other inert gases (subject to regulations).
Unsuitable extinguishing media:	Do not use direct water jets on the burning product; they could cause splattering and spread the fire. Simultaneous use of foam and water on the same surface is to be avoided as water destroys the foam.

5.2 Special hazards arising from the substance or mixture

Incomplete combustion is likely to give rise to a complex mixture of airborne solid and liquid particulates, gases, including CO (carbon monoxide), SOx (sulphur oxides), H₂SO₄ (sulfuric acid) unidentified organic and inorganic compounds.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

5.3 Advice for firefighters

Q8**)**

In case of a large fire or in confined or poorly ventilated spaces, wear full fire resistant protective clothing and selfcontained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

SECTION 6: ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

For non emergency personnel

Stop or contain leak at the source, if safe to do so. Avoid direct contact with released material. Stay upwind. In case of large spillages, alert occupants in downwind areas. Keep non-involved personnel away from the area of spillage. Alert emergency personnel. Except in case of small spillages, the feasibility of any actions should always be assessed and advised, if possible, by a trained, competent person in charge of managing the emergency. Eliminate all ignition sources if safe to do so (e.g. electricity, sparks, fires, flares). If required, notify relevant authorities according to all applicable regulations.

For emergency personnel

Small spillages: normal antistatic working clothes are usually adequate.

Large spillages: full body suit of chemically resistant and antistatic material. Work gloves providing adequate chemical resistance, specifically to aromatic hydrocarbons. Gloves made of PVA are not water-resistant, and are not suitable for emergency use. Wear work helmet, antistatic non-skid safety shoes or boots with adequate chemical resistance. Goggles and /or face shield, if splashes or contact with eyes is possible or anticipated. Respiratory protection: a half or full-face respirator with filter(s) for organic vapours or a Self Contained Breathing Apparatus (SCBA) can be used according to the extent of spill and predictable amount of exposure. If the situation cannot be completely assessed, or if an oxygen deficiency is possible, only SCBA's should be used.

6.2 Environmental precautions

Prevent product from entering sewers, rivers or other bodies of water.

6.3 Methods and material for containment and cleaning up

Spillages to the ground: If necessary dike the product with dry earth, sand or similar non-combustible materials. Large spillages may be cautiously covered with foam, if available, to limit fire risk. Do not use direct jets. When inside buildings or confined spaces, ensure adequate ventilation. Absorb spilled product with suitable non-combustible materials. If it is necessary to store any contaminated materials for safe disposal, only suitable containers (airtight, labelled, sealed, waterproof, earthed and bonded) should be used. In case of soil contamination, remove contaminated soil and treat in accordance with local regulations.
 Spillages to the water: In case of small spillages in closed waters (i.e. ports), contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents. Large spillages: If possible, large spillages in open waters should be advised by an expert, and, if required, approved by local authorities. If possible, collect the product and contaminated materials with mechanical means, and store/dispose of according to relevant regulations.

Recommended measures are based on the most likely spillage scenarios for this material; however, local conditions (wind, air temperature, wave/current direction and speed) may significantly influence the choice of appropriate actions). For this reason, local experts should be consulted when necessary.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

6.4 Reference to other sections

For more information on personal protective equipment, refer to "SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION".

SECTION 7: HANDLING AND STORAGE

7.1 Precautions for safe handling

7.1.1 Protective measures

Ensure that all relevant regulations regarding handling and storage facilities of flammable products are followed.

Take precautionary measures against static electricity. Ground/bond containers, tanks and transfer/receiving equipment. The vapour is heavier than air. Beware of accumulation in pits and confined spaces. Keep away from heat/sparks/open flames/hot surfaces. Do not smoke. Avoid contact with skin and eyes. Do not ingest. Do not breathe vapours

Use and store only outdoors or in a well-ventilated area. Avoid contact with the product. Use adequate personal protective equipment as needed. Do not use compressed air for filling, discharging, or handling operations. Prevent the risk of slipping. Avoid release to the environment.

For more information regarding protective equipment and operational conditions see Exposure scenarios.

7.1.2 Advice on general occupational hygiene

Ensure that proper housekeeping measures are in place. Contaminated materials should not be allowed to accumulate in the workplaces and should never be kept inside the pockets. Keep away from food and beverages. Avoid contact with skin. Do not eat, drink or smoke when using this product. Wash the hands thoroughly after handling.

7.2 Conditions for safe storage, including any incompatibilities

Storage area layout, tank design, equipment and operating procedures must comply with the relevant European, national or local legislation. Storage installations should be designed with adequate bunds so as to prevent ground and water pollution in case of leaks or spills. Cleaning, inspection and maintenance of internal structure of storage tanks must be done only by properly equipped and qualified personnel as defined by national, local or company regulations. After cleaning of tanks and before entering storage tanks and commencing any operation in a confined area, check the atmosphere for oxygen content, and flammability. Store separately from oxidising agents. Store in a well-ventilated place.

Recommended materials for containers, or container linings use mild steel, stainless steel. Some synthetic materials may be unsuitable for containers or container linings depending on the material specification and intended use. Compatibility should be checked with the manufacturer.

If the product is supplied in containers, keep only in the original container or in a suitable container for this kind of product.

Keep containers tightly closed and properly labelled. Protect from the sunlight.

Light hydrocarbon vapours can build up in the headspace of containers. These can cause flammability / explosion hazards. Empty containers may contain combustible product residues. Do not weld, solder, drill, cut or incinerate empty containers, unless they have been properly cleaned.

7.3 Specific end use(s)

See attached Exposure Scenarios

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

Occupational exposure limit values:

Component	Occupational exposure limit values	Reference
FUELS, DIESEL	TLV®-TWA: 100 mg/m ³	ACGIH 2019

Monitoring procedures: refer to relevant legislation and in any case to the good industrial heath practices in the work place.

DNEL (Derived No Effect Level) / DMEL (Derived Minimum Effect Level):

	DNEL Workers				DNEL General Population			
Exposure Route	Long-term, local effects	Long-term, systemic effects (b)	Acute, local effects	Acute, systemic effects	Long-term, local effects	Long-term, systemic effects (b)	Acute, local effects	Acute, systemic effects
oral	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
dermal	Note (a) for 13-wk exposure Note (c) for chronic exposures	2,9 mg/kg /8 h	Note (a)	Note (a)	Note (a) for 13-wk exposure Note (c) for chronic exposures	1,3 mg/kg /24 h	Note (a)	Note (a)
inhalation	Note (a)	68 mg/m3 /8 h aerosol	Note (a)	4300 mg/m ³ /15 min	Note (a)	20 mg/m3 /24 h aerosol	Note (a)	2600 mg/m3 /15 min

Note a: No hazard identified for this route (data available)

Note b: Long-term systemic effects include non-reproductive effects and developmental/reproductive effects. Lowest DNEL is shown.

Note c: No-threshold effect and/or no dose-response information available

PNEC(S) (Predicted No Effect Concentration):

PNEC(S) Water, Sediment and Soil: Substance is a hydrocarbon UVCB: The hydrocarbon block method is used for environmental risk assessment (see REACH guidance, R7, app.13-1). A PNEC cannot be derived for UVCBs, therefore, the risk assessment on the library of representative constituents uses HC5 from the Target Lipid Model (TLM). Following Final Decisions issued by ECHA, a review of the TLM has been conducted that led to a revised TLM-model and the new results are used in this dossier. For full details refer to the following Appendixes attached in IUCLID Section 13: PETRORISK – ProductLibrary tab, PAH Phototoxicity, PNEC HC5, TLM Validation, PETROTOX Verification and NOS Heterocyclics.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

8.2 Exposure controls

8.2.1 Appropriate engineering controls

Minimize exposure to mists/vapours/aerosols. Before entering storage tanks and commencing any operation in a confined area, check the atmosphere for oxygen content and flammability.

8.2.2 Individual protection measures

Eye/face protection:	In the absence of containment systems and if splashing is likely, full head and face protection (protective shield and/or safety goggles) should be used (EN 166).		
Skin protection:	i) Hand protection: In the absence of containment systems and in case of possible contact with the skin, use gloves with hydrocarbon-resistant high cuffs, felt-lined and insulated if necessary. Supposedly adequate materials: nitrile, PVC or PV/ (polyvinyl alcohol) with an index of protection against chemical agents at least equate to 5 (breakthrough time> 240 minutes). Neoprene or natural rubber (latex) do not have adequate characteristics of strength. Use gloves in accordance with the conditions and limits set by the manufacturer. In the case, refer to UNI EN 374 Gloves must be periodically inspected and changed in case of wear, perforations of contaminations.		
	ii) Other: In case of contamination of the clothes, clean and replace them immediately.		
Respiratory protection:	In confined spaces: Use approved devices for respiratory protection: masks with cartridge filter type A (brown for organic vapors). If can not be determined or estimated with good certainty the levels of exposure or if it is possible that there is a lack of oxygen, only use a SCBA (EN 529).		
	In the open spaces: Use approved devices for respiratory protection: masks with cartridge filter type AX (brown for organic vapors with a low boiling point).		
Thermal hazards:	See previous Skin protection.		

8.2.3 Controlli dell'esposizione ambientale

Avoid release to the environment. Storage installations should be designed with adequate bunds so as to prevent ground and water pollution in case of leaks or spills.

Sludge should be incinerated, contained or reclaimed.

8.3 Other information

For more information on personal protective equipment and operating conditions, refer to attached Exposure Scenarios.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

a) Appearance

yellow liquid (automotive use) red liquid (heating use Italy)

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

		green liquid (agricultural use Italy)
b)	Odour	Petroleum odor
c)	Odour threshold	Not available
d)	рН	Not applicable
e)	Melting point/freezing point	≤ 5 °C
f)	Initial boiling point and boiling range	150 - 400 °C (range)
g)	Flash point	>56 °C @ 101325 Pa
h)	Evaporation rate	Not applicable
i)	Flammability (solid, gas)	Not applicable
j)	Upper/lower flammability or explosive limits	LEL 1%; UEL 6%
k)	Vapour pressure	0.4 kPa @ 40 °C
I)	Vapour density	Not applicable
m)	Density	815 - 875 kg/m³ @ 15 °C
n)	Solubility(ies)	Not applicable: substance is a hydrocarbon UVCB.
o)	Partition coefficient: n-octanol/water	Not applicable: substance is a hydrocarbon UVCB
p)	Auto-ignition temperature	>225 °C
q)	Decomposition temperature	Not applicable
r)	Viscosity	1,5 – 7,4 mm²/s @ 40 °C (range)
s)	Explosive properties	Non explosive, there are no chemical groups associated with
		explosive properties in the molecules (Ref. Column 2 of REACH
		Annex VII)
t) (Oxidising properties	Non oxidising, on the basis of its chemical structure, the
		compustible materials (Ref Column 2 of REACH Appen VIII)

Please note that the information above are the main component of the mixture (hydrocarbon UVCB CAS 68334-30-5)

9.2 Other information

Products that relate to this sheet have a sulfur content ranging from 10 mg/kg maximum (eg., use in traction) and 1000 mg/kg maximum (eg., use for heating).

The methods of analysis for the characteristics, which correspond to those recognized nationally and internationally, are set mostly in the technical specifications of the product.

SECTION 10: STABILITY AND REACTIVITY

10.1 Reactivity

The mixture does not present additional dangers of reactivity than those reported in the next subtitle.

10.2 Chemical stability

This substance is stable in relation to its intrinsic properties.

10.3 Possibility of hazardous reactions

Contact with strong oxidizers (peroxides, chromates, etc.) may cause a fire hazard. A mixture with nitrates or other strong oxidisers (e.g. chlorates, perchlorates, liquid oxygen) may create an explosive mass. Sensitivity to heat, friction or shock cannot be assessed in advance..

10.4 Conditions to avoid

Store separately from oxidising agents.

Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking Avoid Static Electricity.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

10.5 Incompatible materials

Strong oxidizing agents.

10.6 Hazardous decomposition products

The mixture does not decompose when used for its intended uses.

SECTION 11: TOXICOLOGICAL INFORMATION

Please note that the information above are the main component of the mixture (hydrocarbon UVCB CAS 68334-30-5)

Toxicokinetics, metabolism and distribution

No experimental data were located on the toxicokinetics of fuels, diesel in vivo.

Experimental studies in animals have shown an absorption through the lungs. Physico-chemical considerations also suggest that highly respirable aerosols of poorly water soluble substances with a log Pow greater than zero will be absorbed to some extent from the respiratory tract. In the absence of further guidance, it will assumed that 50% of an inhaled dose of aerosolized gas oil will be absorbed by the lung in animals and humans.

No measured data are available on the dermal absorption of fuels diesel, however, repeated dose toxicity studies indicates that some absorption across the skin is possible. Results from the SKINPERM model indicate that uptake of gas oil across the skin is likely to be low (with an estimated dermal flux of 0.0001058 mg cm-2 hour, for human skin). However, the reliability of this value is not known, and therefore complete absorption of gas oil by human skin has been assumed.

11.1 Information on toxicological effects

a) Acute toxicity

Acute Oral Toxicity:

Toxicity was evaluated on samples of fuel diesel products of VGOs/HGOs/Distillate fuels, categories. These studies have shown an oral LD50 > 2000 mg/kg bw. Therefore VGOs/HGOs/Distillate Fuels are not classified for acute oral toxicity. Based on available data, the classification criteria are not met.

Acute Inhalation Toxicity:

Animal studies on rats are available for samples of products in this category (VGOs/HGOs/Distillate fuels). Based on results of these studies, VGOs/HGOs/Distillate fuel sare classified as <u>Acute Tox. 4, H332</u> (Harmful if inhaled).

Acute Dermal Toxicity:

Toxicity was evaluated on samples of products in this category (VGOs/HGOs/Distillate fuels). These studies have shown an dermal LD50 > 5000 mg/kg bw. Therefore VGOs/HGOs/Distillate Fuels are not classified for acute dermal toxicity. Based on available data, the classification criteria are not met.

Method	Results	Remarks	Reference
	Oral		
RAT (M/ F) ORAL (gavage) OECD Guideline 420	LD50: 9 ml/ kg (M/ F) (approx 7600 mg/kg)	Key Study CAS 68334-30-5 Reliable without restriction	American Petroleum Institute (API) 1980b

(b) Skin corrosion/irritation

The potential for skin irritation of products in this category have been tested in a large number of studies on rabbits in general. Most of the studies and the overall weight of evidence indicates that VGOs/HGOs/Distillate fuels are irritating to skin and are classified as <u>Skin Irrit. 2, H315</u> (Causes skin irritation).

The following is a summary of the more representative study of the registration dossier.

Method	Results	Remarks	Reference
RABBIT Coverage: occlusive (on each animal, 2 sites were abraded and 2 sites were intact skin) 24/72 h OECD Guideline 404	Irritating Mean erythema score: 3,9 (intact skin) Mean edema score: 2,96 (intact skin)	Key Study CAS 68334-30-5 Reliable without restriction	American Petroleum Institute (API) 1980b

(c) Serious eye damage/irritation

Multiple studies were available to assess the skin irritation potential of VGOs/HGOs/Distillate fuels. Animal studies (rabbits) demonstrate that these products are not irritating to eyes. Therefore VGOs/HGOs/Distillate fuels are not classified for eye irritation.

Based on available data, the classification criteria are not met.

The following is a summary of the more representative study of the registration dossier.

Method	Results	Remarks	Reference
RABBIT 24/48/72 h OECD Guideline 405	Not irritating Mean cornea score: 0 Mean iride score: 0 Mean conjunctivae score: 0	Key Study CAS 68334-30-5 Reliable without restriction	American Petroleum Institute (API) 1980b

(d) Respiratory or skin sensitization

Respiratory system:

This endpoint is not a REACH requirement. Furthermore no data were available for this endpoint.

Skin sensitisation:

Multiple studies were available to assess the skin sensitising potential of VGOs/HGOs/Distillate fuels. Based on available data, the classification criteria are not met.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Method	Results	Remarks	Reference
GUINEA PIG Buehler test	Not sensitising	Supporting study Reliable without restriction	Atlantic Richfield
OECD Guideline 406		CAS 68334-30-5	Company (ARCO) 1990d

(e) Germ cell mutagenicity

The weight of evidence from in vitro and in vivo mutagenic studies indicates that VGOs/HGOs/Distillate fuels are not mutagens, therefore, no classification is given according.

Based on available data, the classification criteria are not met.

The following is a summary of the more representative study of the registration dossier.

Method	Results	Remarks	Reference
In vitro gene mutation (Test di Ames) in Salmonella thyphimurium TA 98 Doses: 0, 1, 3, 5, 7, 10, 15, 20, 25, 40, 50, 60 µl/plate OECD Guideline 471	Positive	Key Study CAS 68334-30-5 Reliable with restriction	Deininger, G., Jungen, H., Wenzel-Hartung, R. (1991)
In vivo chromosome aberration RAT (M/F) intraperitoneal Doses: 300, 1000, 3000 mg/kg OECD Guideline 475	Negative	Key Study CAS 64741-44-2 Reliable without restriction	American Petroleum Institute (API) 1985a

(f) Carcinogenicity

VGO/HGOs/Distillate fuels exhibited varying levels of activity in carcinogenicity testing with some materials demonstrating low carcinogenic potential and others a marked response both in the presence of severe irritation. Carcinogenic activity is reported in the presence of repeated dermal irritation. However, in view of the questionable adequacy of the PAH (polycyclic aromatic hydrocarbons) analysis and the high levels of phenanthrene and pyrene found in some samples tested in the key study, it is uncertain whether a genotoxic mechanism can be ruled out. Therefore VGO/HGOs/Distillate fuels are classified as <u>Carc. 2, H351</u> (Suspected of causing cancer).

Method	Results	Remarks	Reference

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

(g) Reproductive toxicity

Effects on fertility:

The information available currently on reproduction toxicity parameters is insufficient to determine the impact on human fertility. No classification is appropriate at this time. However, a testing proposal is included for a two generation fertility study to meet data requirements for this endpoint.

Based on available data, the classification criteria are not met.

Effects on fertility/ Developmental toxicity:

Developmental studies were only observed developmental effects at doses that caused maternal toxicity and the developmental effects cannot be separated from the maternal effects; therefore, there is no appropriate developmental classification.

Based on available data, the classification criteria are not met.

The following is a summary of the more representative study of the registration dossier.

6 through 15) (6 hours a day)	effects)		
OECD Guideline 414			

(h) STOT-single exposure

Data not available.

(i) STOT-repeated exposure

Repeated dose toxicity studies were conducted in animals for classification of repeated dose toxicity for oral exposure of VGO/Hydrocracked/Distillate fuels. A NOAEC of > 1710 mg/m3 will be carried forward for risk characterisation of systemic effects following sub-chronic exposure to aerosolised diesel fuel. A NOAEL of 30 mg/kg body weight/day, reflecting dose-related changes in liver and thymus, for systemic effects following sub-chronic dermal exposure was obtained.

The overall weight of evidence indicates that VGOs/HGOs/Distillate fuels are classified as <u>STOT RE 2, H373</u> (May cause damage to organs through prolonged or repeated exposure).

Method	Results	Remarks	Reference
	Inhalation		
RAT (M/F) inhalation: aerosol Exposure: 13 weeks (Twice a week) OECD Guideline 413	NOAEC (Systemic effects): > 1.71 mg/L air (analytical) (male/female) NOAEC (Local effects): 0.88 mg/L air (analytical) (male/female) (Lung weight)	Key Study Reliable with restriction Diesel Fuel	Lock, S., Dalbey, W. Schmoyer, R., Griesemer, K. (1984)
	Dermal		
RAT (M/F) subacute OECD Guideline 410	NOEL (systemic): 0.5 ml/kg (male/female) NOEL: 0.0001 ml/kg (male/female)	Key Study Reliable with restriction CAS 68334-30-5	Atlantic Richfield Company (ARCO) 1992e

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

RAT (M/F) Exposure: continuous exposure for 13 weeks (Five days per week for 13 weeks) Doses: 30, 125 e 500 mg/kg/day OECD Guideline 411	NOAEL: 30 mg/kg bw/day (male/female) (clinical signs; body weight; haematology; clinical chemistry; organ weights)	Key Study Reliable with restriction CAS 64741-49-7	Mobil 1989a
--	---	--	-------------

(j) Aspiration hazard

The low viscosity of this product <7 mm2 at 40 °C, may cause risk of aspiration into the lungs during swallowing or subsequent vomiting with lung inflammation (chemical pneumonitis) in accordance with the criteria in Part 3 of Annex I of Regulation 1272/2008.

Thus, VGOs/HGOs/Distillate fuels are Asp. Tox. 1, H304 (May be fatal if swallowed and enters airways).

Other information

There are no further information.

SECTION 12: ECOLOGICAL INFORMATION

Note that the information in this section refer to the main component of the mixture (UVCB Substance, CAS number 68334-30-5).

According to the information below (toxicity short/long term to fish invertebrates algae and aquatic plants, biodegradation etc), this product is classified as <u>Aquatic Chronic 2, H411</u> (Toxic to aquatic life with long lasting effects).

12.1 Toxicity

Endpoint	Results	Remarks	Reference		
	Aquatic Toxicity				
Short-term Invertebrates Daphnia magna OECD Guideline 202	EL50 48/h: 68 mg/l NOEL 48/h: 46 mg/l	Key Study Reliable without restriction CAS 68334-30-5	Girling A and Cann, B (1996b)		
Long-term Invertebrates Daphnia magna QSAR modeled data	NOEL 21/days : 0,2 mg/l	Key Study Reliable with restriction	Redman, et Al.(20010b)		
Short-term Algae Raphidocelis subcapitata OECD Guideline 201	ErL50 72/h: 22 mg/l NOEL 72/h: 1 mg/l	Key Study Reliable with restriction CAS 68334-30-5	Girling, A and Cann, B (1996)		
Short-term Fish Oncorhynchus mykiss OECD Guideline 203	LL50 96/h: 21 mg/l NOEL 96/h: 10 mg/l	Key Study Reliable with restriction CAS 68334-30-5	Girling A and Cann, B (1996b)		
Long-term Fish Oncorhynchus mykiss QSAR modeled data	NOEL 14 days: 0,083 mg/l	Key Study Reliable with restriction	Redman, et Al.(20010b)		

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

12.2 Persistence and degradability

Abiotic degradation:

Hydrolisis: these products are resistant to hydrolysis because they lack a functional group that is hydrolytically reactive. Therefore, this fate process will not contribute to a measurable degradative loss of these substances from the environment.

Photolysis in air: endpoint not required by REACH.

Photolysis in water and soil: endpoint is not required by REACH.

Biotic degradation:

Water / sediment / soil: substance is a hydrocarbon UVCB. Standard tests for this endpoint are intended for single substance.

12.3 Bioaccumulative potential

Substance is a hydrocarbon UVCB. Standard tests for this endpoint are intended for single substances and are not appropriate for this complex substance.

12.4 Mobility in soil

Partition coefficient Koc: Substance is a hydrocarbon UVCB. Standard tests for this endpoint are intended for single substances and are not appropriate for this complex substance.

12.5 Results of PBT and vPvB assessment

Comparison with the criteria in Annex XIII of REACH

Persistence Assessment: An evaluation of representative hydrocarbon structures indicate some structures meet the Persistent (P) or very Persistent (vP) criteria.

Bioaccumulation Assessment: An evaluation of representative hydrocarbon structures indicate NO structures meet the very Bioaccumulative (vB) criterion but some structures meet the Bioaccumulative (B) criterion.

Toxicity Assessment: For representative hydrocarbons structures that were found to meet the P and B criteria, a toxicity evaluation was performed. No structures relevant to petroleum substances were found to meet the toxicity criterion except anthracene which has been confirmed as a PBT substance. Anthracene is not present in this substance at greater than 0.1%, therefore, this substance is not considered a PBT/vPvB.

12.6 Other adverse effects

No data available.

SECTION 13: DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Do not dispose the product, either new or used, by discharging into sewers, tunnels, lakes or water courses.

Dispose wastes and contaminated packaging according to local regulations.

European Waste Catalogue code(s) (Decision 2001/118/CE): 13 07 01* - 13 07 03*. These codes can be given only as a suggestion, according to the original composition of the product, and its intended (foreseeable) use(s).

The final user (producer of the waste) has the responsibility for the attribution of the most suitable code, according to the actual use(s) of the material, contaminations or alterations. The product does not contain halogenated compounds.

Disposal of emptied containers: do not dispose the containers in the environment. Dispose in accordance with local regulations.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

Do not cut, weld, bore, burn or incinerate emptied containers, unless they have been cleaned and declared safe.

Air transport (IATA):	Dangerous for the environment

14.6 Special precautions for user

Transportation, including loading and unloading, must be performed by personnel who have received the necessary training required by the relevant modal regulations concerning the transport of dangerous goods. Ensure that the transfer of the material under conditions of containment or extraction ventilation.

According to Regulation (EC) n. 1907/2006 and subsequent amendments thereto

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

During loading and unloading apply safety measures required by section 7.1 and individual protection measures required by section 8.2.2 of this SDS.

Further prescriptions are reported in the applicable regulations.

F

Additional information on air transport (IATA) Emergency measures in case of aircraft accidents: ERG Code 3L

Hazard Statements

H226:	Flammable liquid and vapour
H304:	May be fatal if swallowed and enters airways
H315:	Causes skin irritation
H332:	Harmful if inhaled
H351:	Suspected of causing cancer
H373:	May cause damage to organs through prolonged or repeated exposure
H411:	Toxic to aquatic life with long lasting effects

Hazard Classes

Acute toxicity, Category 4
Hazardous to the aquatic environment, Category 2
Aspiration hazard, Category 1
Carcinogenicity, Category 2
Flammable Liquid, Category 3
Skin irritation, Category 2
Specific target organ toxicity — repeated exposure, Category 2

<u>Notes</u>

note N: The classification as a carcinogen need not apply if the full refining history is known and it can be shown that the substance from which it is produced is not a carcinogen. This note applies only to certain complex oil-derived substances in Part 3.

Advice on workers training

Properly traine workers potentially exposed to this substance on the basis of the contents of this safety data sheet

To the best of our knowledge, the information contained herein is accurate. This information is intended to describe the product for the purposes of health, safety and environmental requirements only and it should not therefore be construed as guaranteeing any specific property of the product. The information and recommendations are offered for the user's consideration and examination. It is the user's responsibility to satisfy itself that the product is suitable for the intended use. Uses not listed in this document are not recommended unless an assessment is completed.

Section 2.2 Control of environmental exposure					
Product characteristics					
Substance is complex UVCB [PrC3]. Predominantly hydrophobic [PrC4a].					
Amounts used					
Fraction of EU tonnage used in region	0.1				
Regional use tonnage (tonnes/year)	3 1e7				
Fraction of Regional tonnage used locally	20-3				
Annual site tonnage (tonnage (vear)					
Maximum daily site toppage (kg/day)	0.164				
	2.265				
Frequency and duration of use					
Continuous release [FD2].	200				
Emission days (days/year)	300				
Local freshuster dilution factor	10				
	10				
Local marine water dilution factor	100				
Other given operational conditions affecting environmental exposure	1.0- 2				
Release fraction to air from process (initial release prior to RIVIN)	1.0e-3				
Release fraction to wastewater from process (initial release prior to RIVIN)	1.0e-5				
Release fraction to soil from process (initial release prior to RMM)	0.0001				
Technical conditions and measures at process level (source) to prevent release					
Common practices vary across sites thus conservative process release estimates used [TCS1].					
Technical onsite conditions and measures to reduce or limit discharges, air emissions and release	es to soil				
Risk from environmental exposure is driven by freshwater secondary poisoning. [TCR1g]. If dischar	ging to domestic sewage				
treatment plant, no onsite wastewater treatment required [TCR9].					
Treat air emission to provide a typical removal efficiency of (%)	90				
Treat onsite wastewater (prior to receiving water discharge) to provide the required removal efficiency \geq (%)	74.3				
If discharging to domestic sewage treatment plant, provide the required onsite wastewater removal efficiency of \geq (%)	0.0				
Organisation measures to prevent/limit release from site					
Do not apply industrial sludge to natural soils [OMS2]. Sludge should be incinerated, contained or r	eclaimed [OMS3].				
Conditions and measures related to municipal sewage treatment plant					
Estimated substance removal from wastewater via domestic sewage treatment (%)	94.9				
Total efficiency of removal from wastewater after onsite and offsite (domestic treatment plant) RMMs (%)	94.9				
Maximum allowable site tonnage (M _{safe}) based on release following total wastewater treatment removal (kg/d)	1.0e6				
Assumed domestic sewage treatment plant flow (m3/d)	2000				
Conditions and measures related to external treatment of waste for disposal					
External treatment and disposal of waste should comply with applicable local and/or national regulations.[ETW3]					
Conditions and measures related to external recovery of waste					
External recovery and recycling of waste should comply with applicable local and/or national regulations. [ERW1]					
Section 3 Exposure Estimation					
3.1 Health					
The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated.	G21.

Q8 Quaser s.r.l.

the need for a DNEL to be established for other health effects. G36. Risk Management Measures are based on qualitative risk characterisation. G37.

4.2 Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html) [DSU4].

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk model [EE2]. Section 4 Guidance to check compliance with the Exposure Scenario

4.1 Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. G22.

Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. G23.

Available hazard data do not enable the derivation of a DNEL for dermal irritant effects. G32. Available hazard data do not support the need for a DNEL to be established for other health effects. G36. Risk Management Measures are based on qualitative risk characterisation. G37.

4.2 Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html) [DSU4].

Hi PERFORM DIESEL

Q8 Quaser s.r.l.

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html) [DSU4].
